

Stay Safe. Communicate.

APRIL FALLS DAY[®]

The key to safety is communication. Communicate, every risk, every change, every time.

Between mutli-disciplinary teams at team meetings, handover and in documentation.

Between staff, consumer and nominated carer to understand and explain their individual safety concerns.

Falls safety concerns include, side effects of medications, poor cognition, mobility or vision, environment, ability to manage self care, and acute delirium/illness.

Remember - consumers don't have to be older to be at risk of a fall!
