

Stay Safe. Communicate.

APRIL FALLS DAY

The key to safety is communication. Communicate every shift, every risk, every change, every time.

Between mutli-disciplinary teams at safety huddles, clinical handover or intentional rounding.

Between staff, consumer and nominated carer to understand and explain their individual safety concerns.

Falls safety concerns include mental status, side effects of medications, poor cognition, mobility or vision, environment, ability to manage self care, and acute delirium/illness.

Remember - consumers don't have to be older to be at risk of a fall!
